

Loom Walkthrough Script

Dollar Loan Center SEO Assessment | Michael Sylvester | Runtime target: 8–10 minutes

Tabs to have open before recording:

1. dontbroke.com (homepage) 2. seobility.net/en/seocheck (free SEO checker — no signup) 3. pagespeed.web.dev (Google PageSpeed Insights) 4. Ubersuggest or Google Keyword Planner 5. A Google search tab

Speak naturally — this is a guide, not a teleprompter. *Italic bracketed lines* are what to do on screen.

1. Intro (0:00–0:45)

[Screen on the Dollar Loan Center homepage]

“Hey, thanks for watching. I'm Michael, and in the next few minutes I'm going to walk through my SEO assessment of the Dollar Loan Center website. I focused on one page — the homepage — because it holds the most authority and it's where the highest-intent visitors land.

My process here was simple: look at the page the way Google sees it, run it through a couple of free SEO tools to confirm what I suspected, and then prioritize the five changes I believe would move the needle most — not a laundry list, just the ones that matter.”

2. First look at the page (0:45–2:00)

[Scroll the homepage slowly]

“So first, just looking at the page as a user: the design is clean, the calls to action are strong — 'Apply Now' is everywhere it should be. The 'Why You Win' section is actually a goldmine: lowest rates guaranteed, funding in minutes, no application fees, no checking account required. Those are real differentiators.

But here's the SEO problem — most of that value is locked in images and short blurbs. There's very little crawlable text answering the questions borrowers actually type into Google: how much can I borrow, how fast do I get money, do I need a bank account, will they check my credit?

[Right-click → View Page Source, or Ctrl+U. Ctrl+F for <title>]

Now let's look at what Google sees. The title tag is 'Quick & Easy Online Loans' — that's a head term where they're competing with every national fintech in the country. And notice their actual product — the signature loan — isn't in the title, the meta description, or really the H1, which reads 'Online and Cash Loans – Dollar Loan Center.'

[Ctrl+F for og:title]

And one small but telling thing — the og:title is literally the word 'Home.' That's what shows up when this page gets shared or cited by an AI tool.”

3. Free tool #1 — Seobility SEO Checker (2:00–3:30)

[Switch to seobility.net/en/seocheck, paste dontbroke.com, run it]

“To sanity-check this, I'm using Seobility's free SEO checker — no account needed, it just crawls the page and grades it.

[While it loads]

What I'm looking for here isn't the overall score — those are always a little arbitrary — it's the specific flags.

[When results load, point at the relevant sections]

And it confirms the pattern: the meta and heading structure is generic, the text-to-page ratio is low, and the structured data is thin — the page only outputs basic WebPage schema. For a lender with eighty-plus physical branches and a live Trustpilot profile, there's no LocalBusiness or FinancialService markup and no review ratings exposed to Google at all. That's local-pack visibility they've already earned and just aren't claiming.”

4. Free tool #2 — PageSpeed Insights (3:30–4:15)

[Switch to pagespeed.web.dev, run dontbroke.com]

“Quick check on Core Web Vitals with Google's own free tool, PageSpeed Insights.

[When it loads — read the actual numbers on screen honestly, whatever they are]

Performance isn't the emergency here, so I'm deliberately not making speed one of my five recommendations. Part of this exercise is prioritization, and content and structure will pay off more than shaving milliseconds.”

5. Keyword research (4:15–5:45)

[Switch to Ubersuggest / Keyword Planner. Search “signature loans”]

“Now the keyword side. This is where the strategy gets interesting.

'Online loans' and 'personal loans' are dominated by NerdWallet, LendingTree, and the big banks — DLC won't win those from a homepage. But 'signature loans' — their literal product — has real volume with much weaker competition, because most national players don't use that term.

[Search a couple more: “payday loan alternative”, “loans without a checking account”]

The five keywords I'd target on the homepage: signature loans, online installment loans, payday loan alternative, same day loans online, and loans without a checking account. That last one is my favorite — almost no competitor can honestly claim it, and anyone typing it is pre-qualified by their own search.

[Optional: Google “signature loans las vegas” and show the local results]

Geo terms like 'signature loans Las Vegas' belong on their state pages — which exist! — the homepage just links to them with empty anchors like 'Find A Location Near You.' Fixing that anchor text is free authority for the pages that convert best.”

6. The five recommendations (5:45–7:30)

[Back on the homepage, or show the assessment PDF]

“So, my five prioritized recommendations:

One — rewrite the H1 to 'Signature Loans Online: Fast Cash, No Checking Account Required.' Product plus the two differentiators nobody else can match.

Two — fix the title tag and OG metadata. My proposed title: 'Signature Loans Online | Cash in Minutes | Dollar Loan Center.' And kill that og:title of 'Home.'

Three — add an FAQ block answering the five questions borrowers actually search, marked up with FAQPage schema. That's long-tail rankings, rich results, and AI Overview citations from one block of content.

Four — upgrade the structured data to FinancialService and LocalBusiness with their Trustpilot rating, and show the reviews on-page. The trust already exists; it's just invisible to crawlers.

Five — descriptive internal links from the homepage to the state pages: 'Signature loans in Las Vegas, NV' instead of 'Find a location.'"

7. Content rewrite + AI search bonus (7:30–9:00)

[Show the blog rewrite in the PDF]

"For the content piece, I rewrote their 'Same Day Loan Options' blog post — you can see the full 260-word version in the PDF. The approach: lead with the emergency the reader is actually in, compare the four loan options honestly in plain language, and let the signature loan win on facts — no collateral, no checking account, installment repayment. Then trust signals — since 1998, 80-plus locations — and a clear same-day call to action.

Last thing, the bonus question — AI search. AI Overviews and ChatGPT cite pages that answer a question in the first two sentences under a clear heading. So the single biggest opportunity is publishing direct, quotable answers — 'What is a signature loan? A signature loan is an installment loan that requires only your signature and proof of income' — backed by matching schema. DLC is licensed, reviewed, and 25 years old; consistent entity data makes them exactly the kind of source AI engines want to cite for financial queries."

8. Close (9:00–9:30)

"That's the assessment: five prioritized fixes, five keywords, a rewritten homepage title, meta and H1, a rewritten blog post, and an AI-search play — all focused on the same idea: Dollar Loan Center should stop competing for 'online loans' and start owning 'signature loans.' Everything's in the attached PDF. Thanks for watching."
